

Statement / Report on the Use and Impact of Forensic Biometrics Studio

How to use this template: Replace all bracketed fields. Keep only the sections relevant to your institution. The report may be signed by a course coordinator, laboratory manager, forensic expert, project lead, or institutional representative.

1. Issuing Organisation / Practitioner

Name of organisation / practitioner	[Full legal name.]
Department / unit	[Department, laboratory, course, research group, or unit]
Address	[Street, city, country]
Date of issue	[DD MM YYYY]

2. Scientific / Technical Achievement Used

Title of the achievement or software: Forensic Biometrics Studio

Repository / project page: <https://github.com/BiometricsUBB/Biometrics-Studio>

Short description: Development of a user-friendly forensic application designed to support experts in conducting analyses more efficiently by streamlining workflows through automation and advanced algorithms.

3. Confirmation of Use

The issuing organisation / practitioner confirms that Forensic Biometrics Studio has been used in one of the following context:

- educational activities, workshops, laboratory classes, or professional training in forensic science;
- research, validation, demonstration, or prototyping activities related to forensic biometrics or trace comparison;
- expert, analytical, or casework-support activities where no dedicated specialist software is available for a given trace type;
- development of practical competencies in the visual comparison, annotation, and reporting of forensic traces.

Specific use at the issuing organisation: [Describe where and how the software is used, e.g. course name, laboratory practice, training module, research project, or expert workflow.]

4. Evidence of Use and Causal Relationship

The use of Forensic Biometrics Studio directly contributed to the one of following outcomes:

- Providing a dedicated tool for niche forensic fields where automated identification systems were previously lacking;

- Improving the preparation of forensic expert opinions through the software's built-in reporting and feature-marking capabilities which provides more consistent documentation of the comparison process.
- Increasing the realism of the educational process by providing students with tools equivalent to those used in professional forensic laboratories;
- Enabling users to develop advanced skills in the identification, analysis, annotating, and documenting corresponding features on images of forensic traces;

Causal explanation: These outcomes would not have been achieved, or would have been achieved to a significantly lesser extent, without the integration of the research results and tools provided by the Forensic Biometrics Studio project

5. Scope and Significance of Impact

Period of use	[e.g. October 2025 - present]
Number and type of beneficiaries	[e.g. 96 students, 12 experts, 4 research staff]
Geographical scope	International - addressing the critical need for modern forensic tools and training of law enforcement personnel
Area of impact	[education / forensic science / internal security / research / professional practice]

7. Observed Benefits

- greater availability of open-source tools for forensic image comparison;
- support for trace categories that may not be covered by dedicated commercial systems;
- clearer visualisation of corresponding features in two-panel comparison mode;
- improved ability to teach forensic reasoning, feature correspondence, and report preparation;
- facilitation of reproducible documentation through generated comparison reports;
- facilitation of more effective and accessible scientific research in the comparison of traces or biometric features.

8. Declaration

I hereby confirm that the information provided in this report is accurate to the best of my knowledge and reflects the actual use of Forensic Biometrics Studio by the issuing organisation / practitioner. I agree that this statement may be used by the project authors for evaluation, reporting, dissemination, and documentation of the software's scientific, educational, professional, or social impact, unless otherwise indicated below.

9. Signature

Name and surname	[Full name]
Position	[Role / title]
Date	[DD Month YYYY]
Signature and stamp	[Signature / institutional stamp, if applicable]
